Projects

TechShop E-Commerce Platform

A full-stack shopping platform built with the MERN stack (MongoDB, Express, React, Node.js).

- GitHub Link** : https://github.com/dinuwan2002/Ecommerce_app

- Engineered a comprehensive MERN stack application with secure user authentication (JWT) and PayPal payment integration.
- Developed a custom REST API in Node.js/Express to handle product filtering, user management, and order processing.
- Implemented global state management for the shopping cart using React Context API, eliminating prop-drilling.
- Designed a responsive UI with Tailwind CSS, ensuring 100% mobile compatibility and fast load times.

CineScope Movie Explorer

A responsive movie discovery dashboard built with React.js and the TMDB Public API.

- GitHub Link** : <https://github.com/dinuwan2002/cinescope>
- Live Demo** : <https://cinescope-zeta-opal.vercel.app/>

- API Integration**: Implemented asynchronous data fetching using Axios to consume RESTful endpoints for trending content, search queries, and video trailers.
- Advanced State Management**: Architected a global store using React Context API and useReducer to manage the user's watchlist and "watched" history without prop-drilling.
- Data Persistence**: Integrated Local Storage synchronization to ensure user data persists across browser sessions and page reloads.
- Dynamic Routing**: Utilized React Router v6 to create a multi-page experience with dynamic URL parameters (/movie/:id) for detailed views.
- Modern UI/UX**: Designed a mobile-first grid layout with Tailwind CSS, featuring dark mode aesthetics, skeleton loaders, and smooth hover transitions.
